

Exchange Systems Technology Ltd.

Exchange Systems Technology is the leading supplier of cross-asset clearing, settlement and post trade risk management solutions to the global financial industry.

The Eclipse range of products are unique in offering the only integrated platform for multiple asset processing as well as 'best of breed' niche products. These include CFD, Metals, Equities, Listed and OTC Derivative and Global Margining solutions.

Eclipse is built using real time, flexible and cost effective technologies that break the mould of overnight 'T+1' batch processing and silo based legacy systems. Our growing client base covers a wide range of buy and sell side financial institutions and other technology suppliers.

Eclipse

For all users of global listed derivative products Eclipse is the market leading solution. Global banks and brokers use the system for full international clearing as well as a wide range of 'buy' side users such as hedge and institutional funds, arcades, tier 2 banks and retail firms.

MarginClick

The worlds leading on-line, real time margin calculation tool. MarginClick brings global margining directly to the users desktop. Either as an ASP or as an in-house solution.

Eclipse Equities

Integrated settlements solution designed for firms who trade listed securities, equities, bonds and unit trusts - whether on their own behalf or for customers. Features include CREST interface and equity based products such as ISAs, PEPs and SIPPs.

Eclipse CFD

Stand-alone version of the Eclipse processing system that is specifically designed for Contracts for Difference. Finance charges, multiple margins and commissions and real-time risk are part of the core package.

Eclipse Metals

Eclipse Metals is the new listed and OTC front to back LME system that handles APC and warrants contracts.
