

## FFastFill

### Clearing

Viewpoint enables efficient clearing management by matching trades from the clearing houses to their originating orders and then allocating them. It benefits both general clearing members and non-clearing members alike in managing their clearing operations effectively.

A single, exchange-independent interface makes Viewpoint simple to use. Both the allocation and acceptance of trades are handled to automate the majority and highlight the anomalies.

- user configurable
- multiple exchange support
- matching engine
- hierarchical rules engine
- splits via template or ad-hoc
- bulk update and bulk claim facilities
- generic import/export facility
- remote control of exchange gateways
- front and back office integration.

### Order Tracking

FFastFill global orderbook is a multi-asset, global orderbook offering a consolidated view of both working and filled orders to the user. Fills may be enriched with client allocations and execution details and delivered downstream to middle and back office systems for straight through processing.

Please refer to the ASP, ISV, front and middle office sections for details of FFastFill's extensive product range.
