

## FFastFill

FFastFill's Managed Application Services are a combination of its two core platforms: the exchange connectivity service, and the new generation trading, tracking and risk management software. Each of these has been designed to support the provision of software as a service to the end user, removing the need for firms to continue to invest in skills and resources to keep pace with the ever increasing changes in technology and software upgrades.

The service can be accessed either via the web or dedicated leased lines configured to meet the client's needs. The trading solution may be accessed from multiple sites. This provides real-time disaster recovery access and reduces exposure in the event of the loss of a trading site.

- fully transparent, low cost of ownership
- single, customisable SLA
- pro-active service monitoring of the software, infrastructure and network
- highest levels of availability and resilience
- real-time disaster recovery
- highly scalable across number of users, exchanges and end user sites
- support for third party applications

Please refer to the ISV, front and middle office sections for details of FFastFill's extensive product range.
