AtomPro B.V. develops front-end trading applications and risk management software.

AtomPro ScreenTrader®

AtomPro offers the tools that are needed for proprietary trading and market making activities. The software contains the following features:

- Hidden Quotes. The trader has the ability to define a minimal theoretical edge per product. Once activated, the Hidden Quotes functionality will automatically generate Immediate-or-Cancel orders for options, futures and strategies as soon as the opportunity arises
- auto quote enables market makers to automatically maintain a two-sided market in all – or selected number of – options and futures of a security. A clever algorithm determines the priority of quotes before they are sent to the market; this ensures optimal usage of possible bandwidth restrictions that an exchange may impose.
- quote request responding. Some exchanges require their market maker members to answer to quote requests; AtomPro will handle these for you in a manner that you determine
- real-time position management; all positions are updated as trades are executed. All risk information is displayed real-time
- multiple exchanges in one application
- advanced pricing models for equity derivatives.

AtomPro Lite Trader

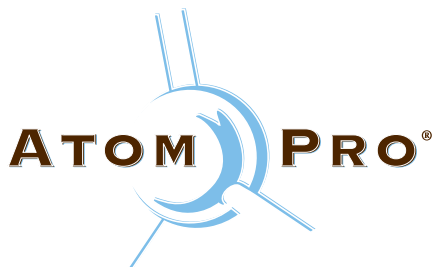

AtomPro has developed a 'lite' version of the successful AtomPro ScreenTrader. The AtomPro Lite Trader features basic functionality to access the Liffe markets. The software enables traders to trade futures, stocks and options and is ideally suited for traders that are looking for simple, reliable and affordable trading software.

AtomPro Stock and Future Trader

The AtomPro Stock and Future Trader can be customised using scripts written in Visual Basic, C# and other .Net languages.

To see AtomPro ScreenTrader® in action, call us for a demonstration.

The screenshot displays the AtomPro software interface, which is a data management tool. The main window is filled with a large table of data. The table has numerous columns, including 'Contract', 'Date', 'Status', 'Type', 'Description', 'Value', 'Currency', 'Unit', 'Start Date', 'End Date', 'Status', 'Type', 'Description', 'Value', 'Currency', 'Unit', 'Start Date', and 'End Date'. The data is organized into several sections, with some rows highlighted in different colors (blue, red, green). The interface also includes a menu bar at the top, a toolbar, and a sidebar on the left with various icons and options. The overall appearance is that of a professional business software application.
