### icubic – e-trading solutions

With icubic, financial institutions can trade more efficiently in multiple asset classes across inter-dealer and dealer-to-customer markets.

#### Inter-Dealer Markets

In liquid inter-dealer markets, where trades are executed automatically, banks must find available volume at the best price. To become a major player – either across the board or in niche instruments – requires comprehensive market connectivity, combined with robust quoting performance and transaction volume capacity. An integrated solution for pricing, quoting, and trading – such as icubic – has been proven to be the best way to achieve this.

#### Dealer-to-Customer Markets

More and more electronic dealer-to-customer markets are emerging, and customers are increasingly demanding a more cohesive cross-asset service from their banks. Banks need strategies to benefit from this proliferation of multiple electronic channels. With icubic they can look at what markets their customer flow comes from and the resulting concentration risk, for example, if they are dealing with most customers via only one or two of the growing number of markets. More importantly, icubic allows them to internalise the client tiering capability so they can open new channels as required while maintaining a single point of control for pricing and contributions.

## Benefits

Financial institutions that use the icubic solution can:

- Decrease time-to-market for new instruments and electronic trading markets, quickly broadening their distribution channels
- Improve customer/sales management with a single window view for administering multiple markets, asset classes, and customer data
- Improve customer service through customer tiering that enables traders to send specific offers by individual spreads per customer and/or instruments
- Achieve faster execution times, with rapid delivery of spread-adjusted prices over a wide range of products
- Benefit from workflow and control features as icubic easily integrates with pricing and booking systems, as well as risk and settlement systems
- Take advantage of seamless connectivity to a broad range of electronic trading markets and information services, covering a wide range of instrument types, including fixed income, foreign exchange, repos, loans and deposits, swaps, equity derivatives and warrants.
