Object Trading delivers high performance, enterprise trading solutions for capital market institutions and trading professionals worldwide. Our component-based FrontRunner™ suite is a core infrastructure for the global development and management of sophisticated electronic trading systems.

Existing signature clients include global investment banks and major brokers as well as prop-traders and market makers. Other distributors include front-office trading system vendors listed elsewhere in this directory who choose to power their own access to Liffe (and other markets worldwide) using our FrontRunner™ components. Core components are often “white-labelled” and integrated into our clients own solutions for on-distribution to end-clients worldwide.

FrontRunner™ is a server-based product that sets the performance standard in every marketplace we serve. Flexible, reliable and high performance – all in a simply integrated component-based product set. Supported 24x7 across all hours of market operation.

Solution components include:

### FrontTrade

Order management server with key features and benefits including:

- shared order book management and order transfers between users
- multi-user and group functions for risk management
- unified order capabilities across all counterparties and exchanges, regardless of native exchange support
- synthetic and contingent order management
- scalable solution that can support single high-valued clients through whole trading desks and organisations
- supports order flow from multiple sources to multiple execution venues (eg. other order routing networks).

### FrontPrice

Price server with key features and benefits including:

- high-speed price delivery to multiple trading clients and destinations
- selectable forms of transport, from peer-to-peer guaranteed message delivery, through to guaranteed broadcast and multi-cast

- scalable “chaining” of FrontPrice servers to efficiently service offices remote from exchange gateways or traders on the move
- supports live market data and (optionally) reference data from a choice of data vendors.

### FrontGate

Remote access gateway solution supporting multiple trading clients and order sources safely and securely from private or public networks:

- bridges firewalls and DMZs
- 3DES encrypted
- 8:1 compression
- facilitates teleworking and trading away from the office
- simplifies deployment of servers and distribution of thick-client trading front-ends
- provides failover management for multiple server deployments.

### Integration with FrontRunner

FrontRunner components may be seamlessly integrated with existing infrastructure for market making, arbitrage, spreading and proprietary/program trading systems via your choice of:

- rich proprietary APIs (COM, C++, .NET, Java), and/or
- open industry messaging standards such as the FIX protocol.

### Solutions

Object Trading is pleased to offer complete trading solutions including:

- strategy management/execution servers – configurable rules-based platforms for complex trade strategy automation, inter-exchange, inter-commodity
- tools – market simulation and trading test tools
- bespoke solutions – customised market making, arbitrage and other trading solutions.
