The riverrun trading system is a front-office application for professional option market makers. The main features of the trading system are:

- reliability is achieved by using the latest Java technology
- speed: The software is optimised for fastest order execution. This is a high performance application
- easy to use: The user interface is highly configurable yet easy to learn because it is very consistent in its features. Even complex tasks can be achieved with minimal effort
- fast order entry: Extremely quick trade execution facility developed in co-operation with experienced screen-traders
- real-time calculations: The theoretical prices, Greeks and the P&L are always up-to-date. They are also used for quoting and pre-trade risk checks
- mass quoting capability: As a professional market making tool the system has very powerful mass quoting capabilities
- manage volatility skew changes: The system was designed to allow the trader to make changes in the volatility skew easily and quickly
- pre-trade risk control: The system performs a variety of reality checks before an order is submitted
- post-trade risk control: The system allows the risk manager to monitor a trader's positions and risk in real-time. All this information can also be displayed in a Web browser or on a WAP capable telephone
- automated trading: The system has very sophisticated automatic trading algorithms.
