Fully automated order entry over the web

RANorder is an automated order entry and management system specifically designed to handle an FCM's functional requirements. Remote client trade entry, pre-trade order risk control, order management and transaction routing are all part of available functionality. RANorder utilises HTML and Windows front-end interfaces for order entry and account access over the internet, making client order entry and data delivery easy and cost effective.

Business benefits

- firm wide, intra-day risk analysis and flexible pre-trade order risk
- integrated front-to-back solution reduces errors and increases efficiency
- private label capabilities and fully customised front-end options allow you to meet your marketing objectives.

Edge

Rolfe & Nolan's Java based front-end trading application, Edge, accommodates the needs of all types of traders. From the low volume retail market to the institutional and professional trader, Edge enables users to take advantage of the wide-ranging connectivity, market depth trading and robust credit control functionality offered in all of Rolfe & Nolan's order routing products.

Key benefits

- comprehensive credit and risk control
- market depth trading
- access to all major floor and electronic markets
- order routing via other exchange member firms
- multiple markets on a single screen
- java-based technology allowing simple client deployment
- FIX compliant API for customers developing their own trading application.

Market APIs currently include Liffe, additional European exchanges and all North American exchanges.

Edge is available on multiple platforms including Windows® and Mac® and developed in Java for optimal performance and reliability.
