The Stellar trading system fulfils the needs of the high frequency, high volume professional trader.

Stellar blends the latest technologies with extensive experience to create a high performance, institutional strength trading platform.

We work in partnership with client firms to understand their requirements, responding to functionality requests and tailoring the system where necessary to produce the ultimate trading solution. Whether deployed in a 20 or 100+ trader operation, Stellar delivers excellent performance throughout the busiest of market conditions.

Stellar spreadMachine

The Stellar spreadMachine provides automated working and execution of cross-product/cross-market strategies. The spreadMachine's unique server-based architecture delivers unrivalled performance, whilst conditional payup and finesse algorithms maximise return potential. SpreadMachine strategies are traded seamlessly alongside exchange listed products.

Stellar risk management

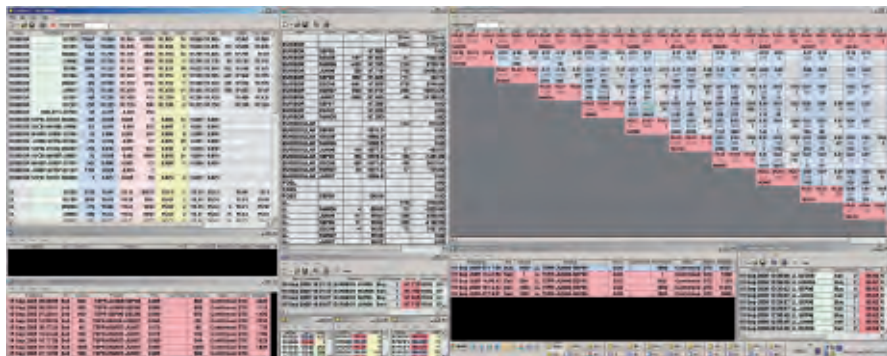

Stellar provides industry leading pre and post trade risk control. The risk manager is presented with a concise overview of all account activity, whilst drill-down functionality provides detailed information when required. Visual, audible, and email alerts inform the risk manager of limit warnings and potential breaches.

Stellar front end

Complete customisation of the look and feel of Stellar is possible, allowing a trader to suit his own personal style or to ease the migration path from a legacy system. The interface has an emphasis on speed of order entry and manipulation.

Key features

- connectivity to all major European and US derivatives exchanges
- built for fast and sustained order throughput
- distributed multi-threaded architecture for maximum performance
- specialised algorithmic trading framework
- comprehensive open C++ API and Excel interface
- buy and sell side FIX connectivity
- stop, OCO, and Iceberg order types across all exchanges
- satellite office and remote trader support
- hot-failover fault tolerance across all servers and exchanges
- server support for Linux and Windows.
