As market leader in the development of Banking software for the securities trade in the Netherlands, Syntel has been an independent provider of a wide range of products and services for more than 25 years.

Fintegrator, a real-time and near-real-time messaging system, standardises the interface between back-office systems (such as EuroPort+, Syntel's securities administration system) and other systems, both internal and external. A central dispatcher takes care of relaying messages to the receiving gateways.

Using a generic functional datamodel in XML means that no knowledge of the external format is needed to send messages to an external system.

An interface with CTCL and LIFFE CONNECT® for STP entry and processing of derivatives orders is available for Fintegrator. Other available interfaces are NSC, TCS, Clearing 21®, SWIFT, Telekurs, Reuters, international brokers, exchanges, SOAP and other messaging systems like WebSphere MQ and TIBCO. Fintegrator's open architecture makes it easy to add new interfaces.

Fintegrator's key features are:

- platform-, language- and database-independent integration tool
- real-time and near-real-time routing and conversion of messaging flow
- open architecture
- based on the international standards
- high performance
- cost efficiency
- rapidly growing selection of standard interfaces, e.g. NSC, Clearing 21®, LIFFE CONNECT®, S.W.I.F.T.
- easy addition of client-specific interfaces.
