

## Fimat International Banque S.A.

Fimat offers a complete range of e-trading solutions that provide customers secure and direct access to markets from anywhere in the world.

We offer customers both custom-built and off-the-shelf access to execution (screen, API, FIX...) and a choice of connectivity (leased line, VPN...). Thanks to Fimat's unparalleled market coverage, customers can access 60 derivatives and 20 cash markets worldwide. At Fimat, we have developed our own e-trading solutions, selected our providers on a vendor neutral basis, which ensures our clients have the greatest possible choice of platform depending on product type or region (ISVs include TT, GL, PATS, ORC, Trading Screen, etc.)

Fimat e-trading solutions integrate execution and both middle and back office functionalities into a common straight through process (STP) within the Fimat environment, giving customers real-time access to trade data in a choice of formats.

Our solutions are supported by a team of e-trading specialists, who will work with you to provide feasible solutions to all your e-trading requirements, offering both technical and functional assistance and pro-active systems monitoring, 24 hours a day.
