

MAREX Financial Ltd.

E-Trader

E-Trader combines order execution, real time risk management, and access to all LIFFE CONNECT® and other global Futures and options exchanges from a single desktop application. The application can be branded as your own and distributed across the internet or local LAN.

To achieve these specifications E-Trader is driven from our proven server side Technology “EasyRouter”. This server side software can be hosted anywhere there is exchange connectivity, allowing for bespoke technical solutions as per client specification, or you can connect to our hosted environment via the internet or VPN. We can offer trading solutions from a single trader through to entire trading arcades. All this with an easy to use administrative web interface, giving full granular risk permissioning across multiple trading accounts and markets.

We can now also offer full clearing services to LIFFE CONNECT® and all other global exchanges, resulting in very competitive pricing be it a hosted ISV installation or an individual trader.
