Fidessa has provided trading systems, market data and connectivity solutions to the global financial community for over 25 years. With offices in London, Paris, New York, Boston, San Francisco, Toronto, Tokyo and Hong Kong, Fidessa is used by around 22,000 users at over 520 clients around the world.

Fidessa provides true multi-asset support that allows cash, futures, options and other asset classes to be traded simultaneously. Central to the system is a workflow centric approach that reflects the dynamics of how each asset class is traded, yet enables them to be combined and managed through one order book.

Fidessa also incorporates a range of smart order-routing modules that support baskets, pairs and numerous other forms of algorithmic trading services that span asset-classes and global exchanges.

The Fidessa connectivity network has links to 255 brokers, 92 exchanges and 1,500 buy-side firms globally.

Delivered through a thin-client workstation, as a hosted application suite or on a bespoke enterprise basis, Fidessa is built on the clear vision of providing the richest functionality, coverage and distribution.
