

EURONEXT

Mini ETF Options

**Ride the ETF wave, seize opportunities,
optimise your strategy.**

As the leading exchange for options trading in Europe, Euronext is committed to driving innovation and fostering retail participation in derivatives markets. To that end, Euronext introduces mini-sized, euro-denominated ETF options, improving market accessibility and providing investors with a broader range of trading opportunities.

This launch responds to the growing demand for ETF and options trading by enabling investors who meet the appropriate criteria to trade ETF options in euros and access tools for leverage and hedging within a regulated framework.

ETF options are complex financial instruments that entail significant risks and may not be suitable for every investor. Retail investors who wish to trade on the regulated markets operated by Euronext and require any information or advice in this regard should consult their financial intermediary.

What are ETF options?

ETF options, which fall under the category of derivatives products, provide similar risk management and portfolio enhancement opportunities.

They combine the diversification benefits of ETFs with the flexibility of options. Through ETF options, market participants can adopt different trading strategies depending on the market outlook.

Options on ETFs offer investors, especially those already investing in ETFs, an efficient tool to hedge or leverage their ETF investments in a transparent and reliable exchange environment.
