# Euronext® Helios Space Index

**Euronext and the European Space Agency**, in collaboration with the European Commission and Promus Ventures, have developed the first Euronext European Space-related index, measuring the stock market performance of European companies in the Space sector.

The Euronext Helios Space Index is designed to display a fair and balanced representation of European-born and European-operated Space companies, boosting the visibility of companies in the index and allowing the creation of products to support investment strategies.

Space is an important driver of innovation in Europe, and the Euronext Helios Space Index has been developed in response to the need to synthesise information and evolving trends within this rapidly developing sector. The index will enable these companies at the cutting edge of technology to benefit from the positive effects of inclusion in a stock market index.

**The European Space Agency (ESA)** is Europe's gateway to space. Its mission is to shape the development of Europe's space capability and ensure that investment in space continues to deliver benefits to the citizens of Europe and the world.

ESA is an international organisation with 22 Member States. By coordinating the financial and intellectual resources of its members, it can undertake programmes and activities far beyond the scope of any single European country.

The Euronext Helios Space Index offers opportunities for the creation of a wide range of investment vehicles such as ETFs, funds and structured products.

**The Euronext Helios Space Index helps investors identify companies with ‘upstream’ and ‘downstream’ activity related to the Space industry, which are within ESA Member States or which benefit from European support (business incubation, acceleration, financing).**

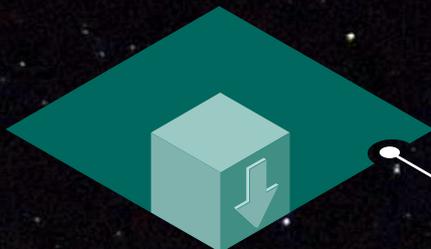

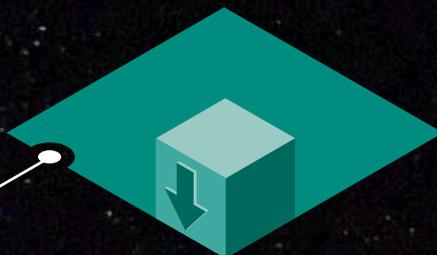

- **Upstream** companies include the design and manufacturing of space systems and related launch vehicles, ground segment networks and the design and delivery of hardware and software for the deployment of ground stations.
- **Downstream** companies include satellite operators delivering communications, navigation and earth observation services to end users and service providers.

# Building Blocks

## STARTING UNIVERSE

Listed companies from developed-world countries

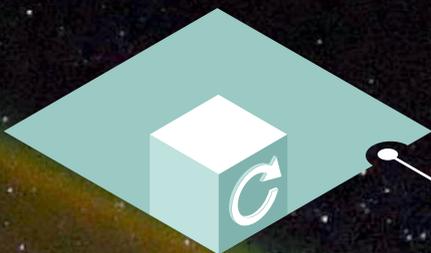

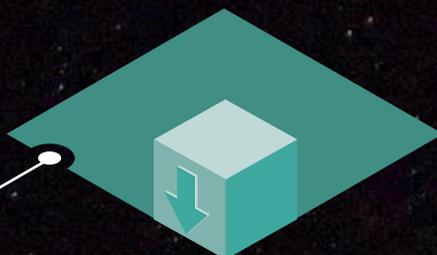

## EXCLUSION

Companies with a 3-months Average Daily Traded Volume lower than 2 million EUR and companies with a Free Float Market Capitalisation lower than 200 million EUR.

## SELECTION

European-born companies and worldwide space sector companies benefiting from European Union support (business incubation, acceleration, financing), identified by the European Space Agency.

## LIQUIDITY

Free Float Market Capitalisation weighted.  
Constituents are capped at 10% at reviews.
