

# ETF OPTIONS

## New trading opportunities

Six new options are now available on Euronext's Exchange Traded Funds (ETFs), complementing our growing franchise and offering more trading opportunities.

## New asset classes

Through a simple existing option structure market participants have access to broad and diversified index exposures.

## Who are ETF Options for?

Investors who use options on ETFs as a risk management tool to hedge their existing positions or to create leveraged strategies.

Options on ETFs provide the same risk management and portfolio enhancement opportunities as individual equity options. They combine the diversification benefits of ETFs with the flexibility of options. Through ETF options market participants can adopt different trading strategies depending on the market outlook.

Options on ETFs offer investors, especially those already invested in ETFs, an efficient tool to hedge or leverage their ETF investments in a transparent and reliable exchange environment. For central order book trades a Price Pro Rata trading algorithm is applied, as explained in the contract specifications.

## Benefits

- Opportunity to trade new underlying assets through a well-known vehicle
- Competitive pricing throughout the trading day provided by Liquidity Providers
- Central order book trading via Euronext's state-of-the-art Universal Trading Platform, as well as wholesale trading through the Large-in-Scale Facility
- Clearing of trades through LCH.Clearnet SA
