1. EURONEXT OPTIQ MARKET DATA GATEWAY SOLUTION

1.1 INTRODUCTION

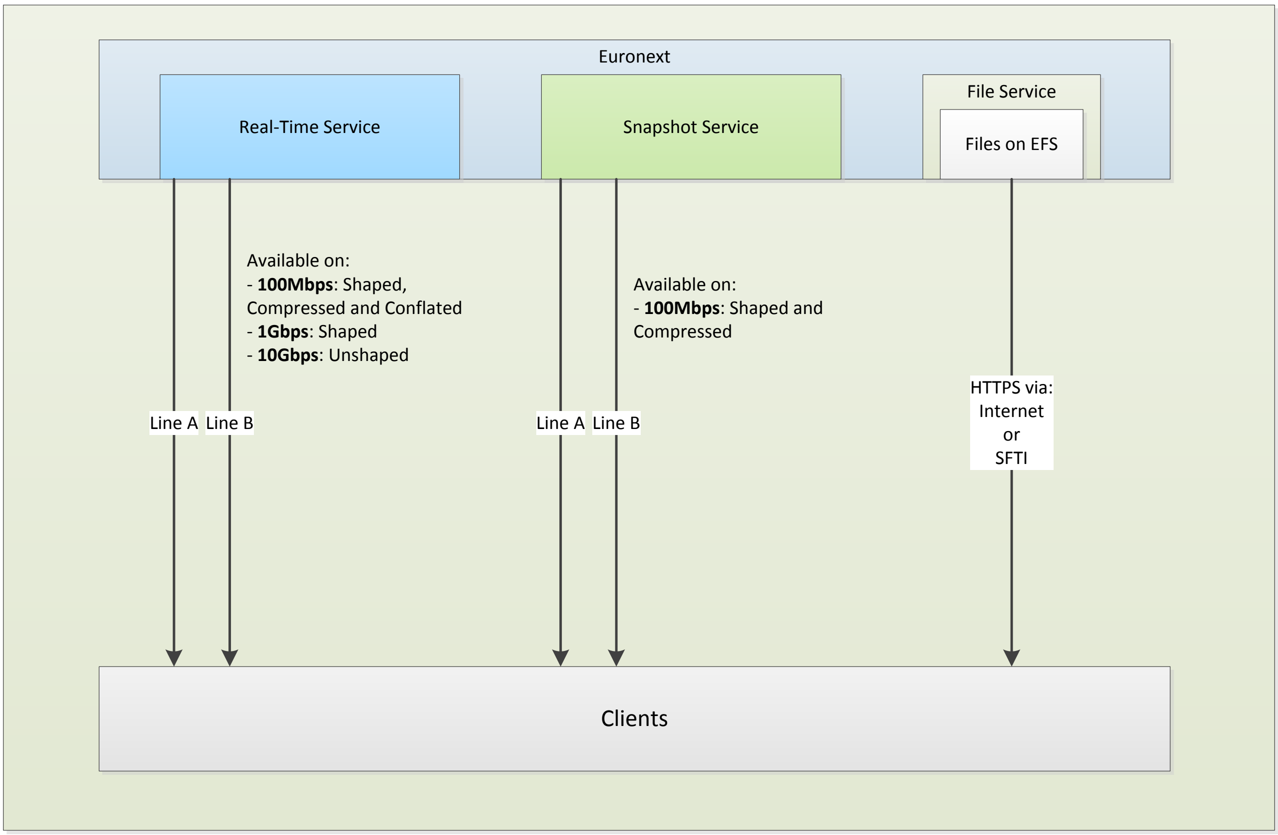
This document details the Referential Data HTTPS Server for Euronext, to be used in conjunction with the Optiq MDG Client Specifications.

The Servers provide full referential data for the Euronext markets, as well as feed configurations and intraday trades with their MiFID II flags. Users of the Euronext market data feed should use the Servers to:

- Configure feed connections every day.
- Support the referential data that is disseminated on the feed.
- Complete their list of trades.

1.2 ACCESS TO FILE SERVER

Access to Euronext File Server (EFS) in p-EUA and production is only available through Internet and SFTI using HTTPS protocol.



Access to p-EUA and Production environment will only be granted to customers that have at least one of the agreements in place with Euronext as defined in Optiq Euronext File Services User Guide (available here: https://www.euronext.com/sites/www.euronext.com/files/)

External clients have a read only access that allow to download files but not to upload or modify files.

The HTTPS protocol server details can be found in Euronext Optiq™ Market Data Gateway External User acceptance Environment.

Below is the folder structure that will contain files for 5 rolling trading days:

Architecture	Description
OptiqMDG	Defines that all the following files are Optiq files for Market Data
└ Environment	Defines if this is in "Production", "v-EUA" or "p-EUA"
└ Current	For the current day file.
└ OptiqSegment	Defines the segment on Optiq
└ Current	For the current day file.

Immediately in Environment folder are:

- CashTickSizeReferentialFile
- SBETemplate (only for Derivatives)

And In OptiqSegment:

- OpenInterestFile
- PrevDayCapAndVolTradeFile
- FullTradeInformationFile
- CashStandingDataFile
- DerivativesStandingDataFile
- SBETemplates (Step 2)
- TimetableFile
- CashTickSizeReferentialFile

1.3 FILE NAMING CONVENTION

The files are of different types:

- Cross Optiq Segment Files, i.e. a unique file is generated for all Optiq Segments.
- Files generated by Optiq Segment, once a day.
- Files generated by Optiq Segment, several times a day.

As a result, the file naming convention varies according to the type of file.

Cross Optiq Segment Files generated once a day

These files are unique referential files, valid for all Optiq Segments. It is therefore not required to generate the same file for each Optiq Segment.
Cross Optiq Segment files will have the following naming convention:
<OptiqGateway>_<Environment>_<FileName>_<ALL>_<Date>.xml
Where :

- OptiqGateway is 'OptiqMDG', for MDG files or 'OptiqOEG', for OEG files
- Environment and FileName are the same as defined in folder structure.

- OptiqSegment is always ‘ALL’.
- Date is the current trading date with format ‘YYYYMMDD’

The files concerned are the following:
- CashTickSizeReferentialFile
- SBETemplate (only for Derivatives)

Example of the Cash Tick Size Referential File generated in Production on the 1st of June 2017:
OptiqMDG_Production_CashTickSizeReferentialFile_ALL_20170601.xml.

And it will be located in:

OptiqMDG
└ Production
 └ CashTickSizeReferentialFile
  └ Current

Files generated by Optiq Segment once a day

Files generated by Optiq Segment once a day will have the following naming convention:
<OptiqGateway>_<Environment>_<FileName>_<OptiqSegment>_<Date>.xml
Where :
- OptiqGateway is ‘OptiqMDG’, for MDG files or ‘OptiqOEG’, for OEG files
- Environment, FileName and OptiqSegment are the same as defined in folder structure.
- Date is the current trading date with format ‘YYYYMMDD’

The files concerned are the following:
- OpenInterestFile
- PrevDayCapAndVolTradeFile
- CashStandingDataFile
- DerivativesStandingDataFile
- SBETemplates (Step 2)
- TimetableFile
- CashTickSizeReferentialFile

Example of the Open Interest File generated in Production on 1st of June 2017, on the ‘Options’ Optiq Segment:
OptiqMDG_Production_OpenInterest_Options_20170601.xml

Files generated by Optiq Segment more than once a day

Files generated by Optiq Segment once a day will have the following naming convention:
<OptiqGateway>_<Environment>_<FileName>_<OptiqSegment>_<Date>_<Time>.xml
Where :
- OptiqGateway is ‘OptiqMDG’, for MDG files or ‘OptiqOEG’, for OEG files
- Environment, FileName and OptiqSegment are the same as defined in folder structure.
- Date is the current trading date with format ‘YYYYMMDD’
- Time is the current trading time with format ‘HHMMSS’

Currently, the only file concerned is the FullTradeInformationFile.

Example of the Full Trade Information File generated in Production on the 1st of June 2017 at midday (12h00), on the 'Equities' Optiq Segment:
OptiqMDG_Production_FullTradeInformationFile_Equities_20170601_120000.xml

And it will be located in:

OptiqMDG
└ Production
└ FullTradeInformationFile
└ Equities
└ Current

1.4 SERVER AVAILABILITY

The server is available 24 hours a day, seven days a week.

1.5 FILE VERSION AVAILABILITY

The OEG and MDG SBE Template files are Backward and Forward compatible and we will keep the supported versions available on the sever. For more information on Backward and forward compatibility of SBE, please refer to the client MDG specifications: Euronext Cash and Derivatives Markets – Optiq MDG Client Specifications.

For all other file types, in case of a new version of the file, customers will have to migrate to the new version of the file on the go-live date. We will only provide the latest version of the file for the current trading day.

3. FILE DESCRIPTION

3.1 SBE TEMPLATE FILES

SBE Template files aim to decode SBE messages using an SBE decoder.

- **Only for Derivatives:** The MDG SBE Template file is a cross Optiq Segment file, directly available in the Environment folder,
- **In Step 2:** 2 SBE Template files are available : one for OEG and one for MDG. These files are stored in each <OptiqSegment> folder.

All SBE tools and documentation needed to generate (encode and decode) SBE messages will be available on:

https://github.com/real-logic/simple-binary-encoding (refer to SBE Disclaimer in appendix)

This file structure is defined by SBE protocol and contains:

- The list of all technical fields
- SBE Headers structure
- The list of all possible values for each Enumerated fields
- The list of all possible values for each Bitmap fields
- The structure of each message with the expected order of each fields

Clients must check the file every day to determine whether a new Schema Version is available.

Full and detailed message structures are specified in the **Euronext Cash and Derivatives Markets – Optiq MDG Client Specifications**.

File Availability:

Available 24/7.

Scope of contents:

All Euro

One file per Optiq Segment.

next segments and all SBE messages for Market Data.

Important note :

Compatibility between MDG SBE template of step 1 and step 2 is not maintained.

Until further communication, and to reduce impact on clients not impacted by migration to step 2 in production the MDG SBE template is kept in the root folder with "ALL" in the name and will apply only to the Derivative segments.

3.2 CASHSTANDINGDATAFILE (9007)

The Cash Standing Data file provides referential data for cash markets.

The file provides three structures per instrument breakdown.

- The first structure provides the standing data functionally needed for trading purpose.

All operational referential data broadcasted on the feed at start of day via Optiq MDG Standing Data 1007 message are also available in this section.

The only difference between the feed and the file relies in the format on which some data are provided.

As an example, Timestamps on the feed are provided in number of ns since 1970 January the 1st. The file structure provides them in human readable format (YYYYMMDD).

- The second structure is dedicated to MD connectivity. It provides the physical addresses of channels on which data are disseminated for the given instrument, which access depends on client authorization.
- The third structure provides connectivity information for all Cash Order entry gateways of the concerned Optiq Segment and the associated Drop Copy (DC) gateway.

File Availability:

Available 24/7.

Scope of contents:

Cash instruments.

Intraday updates:

This file will be updated overnight.

3.3 CASHTICKSIZEREFERENTIALFILE (9020)

General characteristics of the Cash Tick Size file

The Ticksize file contains different tables defining the variable ticksizes used for trading activity. A table is composed of an index (identifying a table instance) with a list of price ranges that have corresponding ticksizes, this is associated to an instrument class level. If an instrument uses specific variable ticksizes, which are different than the Class, the specific table index will figure in the Instrument Standing Data.

Fixed ticksizes are actually also included in the ticksize, they correspond to indexes for which only one entry range [0,MaxValue] is defined. In this case, the tick value itself is sent in the Instrument Standing Data, instead of the table index. If a fix ticksize and a variable ticksize are defined on an instrument, the fix ticksize takes priority over the variable ticksize.

Point of attention: certain TCS products do not have ticksizes (and this is this is the expected behaviour).

Ticksizes depend of the EMM and certain EMMs do not support ticksizes.

File availability

This file is available at the start of day and is needed by the Customers for the trading day. Customers must be able to download and process this file on a daily basis.

Scope of contents

The file scope is the following: a tick size table for Cash markets, contains variable (price range-dependent) ticks and fixed price ticks.

Intraday updates

No intraday update will be performed on the Tick Size table. Should the need arise, updates will be done in the referential tool and will be applied on the following business day (i.e. D+1). Meaning, the file will only be updated on a daily basis.

3.4 DERIVATIVESSTANDINGDATAFILE (9013)

The Derivatives Standing Data file provides all referential data for derivatives markets.

On the derivatives market, 3 different messages will broadcast standing data on the feed : Contract Standing Data, Outright Standing Data and Strategies Standing Data.

On a contract based breakdown, data will be provided with a file with one nested structure. Following that, at a contract level, two sections will be added to deal respectively with MD connectivity and in the future with OE connectivity.

File Availability:

Available 24/7.

Scope of contents:

Derivative instruments.

Intraday updates:

This file will be updated overnight.
